

# GeStEINs-Colloquium 2021

## General Framework

Geowissenschaftliches Studentisches  
Erfahrungs- und Interessensnetzwerk

**Dear Geoscientists and geoscience students,**

We are happy to introduce the general framework and idea of the GeStEINs-Colloquium.

**Topics:**

Presentation topics can and should be freely chosen by the presenter - the only exception, it must have a geoscientific background. Regardless of whether the presentation revolves around current research, addresses social issues or gives an overview of the geology of a specific region: the lecture topics can be varied.

**Who can present:**

- Master students from the 3rd semester onwards
- PhD candidates
- Post-Docs
- Professors and lecturers
- Scientific employees
- Employed persons in the geosciences and industry

**Presentation duration and progression:**

The colloquia will begin with a brief introduction to the respective persons and their presentation topics. Afterwards, presenters will begin sharing. Two presentation lengths are planned:

- 20 - 30 minutes
- 60 - 90 minutes

The shorter presentation length is intended to act as a preliminary program for the longer presentation. Research projects, introductions to complex analytical methods or theses of any kind can be presented. The coupling of related presentation topics will then be completed by the GeStEIN team.

At the end of the presentation, the audience will naturally be encouraged to ask questions.

**Presentation language:**

Presentations can either be held in **German** or **English**.

**Event dates:**

The GeStEINs colloquia will begin during the summer semester of 2021, and are planned to take place once per month. The colloquia will be held online either over the communications platform Zoom or WebEx. Therefore, a stable internet connection, as well as a video camera and a good microphone are required.

The exact dates will be determined individually at least 4 weeks in advance.

**What do we need from you:**

In order to present at the GeStEINs colloquia, we require a **short description** of your presentation topic, as well as a few sentences about yourself including your location, presentation title, and your research or work focus in the field of geosciences. Please submit all documents in a PDF format.

For the submission of documents, further questions, and comments, please contact:
